Thanks, Rick -- very helpful. I sent her the link and that should be it. not too concerned bc she isn't a reporter.

Thanks, Julia. The website info should hopefully satisfy this one. Let me know if there are follow ups.

In case useful-- here's a version of the basic statement we've been sharing with reporters who ask for updates. Some version of this should be useful until we have new data and details on the peer review process.

EPA coordinated with USGS, the tribes, and the State of Wyoming to resample our deep monitoring wells in Pavillion in April. The purpose of the sampling was to gather more information about the groundwater and provide additional data for consideration by a peer-review panel that will review EPA's draft report issued last December. EPA also separately resampled nearby domestic wells. Samples have been sent to laboratories for analysis and will be subject to a quality assurance review before being compiled into summary reports. We expect data reports from EPA and USGS will be available and posted online by this fall. These data will also be made available to the peer reviewers to consider as they review EPA's draft report.

Hi, Rich,

I left you a vm about this. I am going to send her the link on the website to the Pavillion investigation and assume that takes care of her unless I hear otherwise from you.

Just wanted to both check in with you about this and to let you know it came it.

Thanks.

Julia

P.S. I was mistaken on my call, she is not at a WY university she is at Southern IL.

Hi Julia-
Can you please tell me the status of the Pavillion,Wyoming investigation of ground water report? I have the draft, was there a final report? if so could you send me a link?
Thank you Eileen Waldron
